

WEI FU

Mobile / iOS Software Engineer | SwiftUI | AI/API Integrations | App Store Shipping

San Francisco Bay Area, CA | 413-588-8637 | founder@weiproduct.com

Portfolio: weiproduct.github.io/ME | Company: weiproduct.com

SUMMARY

Mobile/iOS software engineer and UMass Amherst CS graduate with a public 17-app iOS/AI portfolio. Strong in SwiftUI, UIKit fundamentals, App Store releases, mobile UI architecture, local state/persistence, AI/API integration, debugging, and client-server workflows using Node.js/Express, REST APIs, OpenAI, Whisper, and Claude.

TECHNICAL SKILLS

Languages: Swift, Python, JavaScript/TypeScript, Java, C++, SQL

iOS/Mobile: SwiftUI, UIKit, Xcode, App Store Connect, iOS lifecycle, local persistence, async APIs, permissions/privacy

Backend/AI: Node.js, Express, REST APIs, HTTP/JSON, Firebase, OpenAI API, Whisper API, Claude API, prompt design

CS/Product: Data structures & algorithms, OOD, debugging, Git, OS, networks, databases, consumer UX

EXPERIENCE

WeiProduct, Inc. - Founder / Mobile & iOS Software Engineer

San Francisco Bay Area, CA | 2025 - Present

- Built, shipped, and maintained a public 17-app iOS/AI portfolio across calendar, habits, notes, voice, weather, finance, learning, wellness, and utility workflows.
- Owned end-to-end mobile execution: SwiftUI implementation, AI/API integration, local state/persistence, onboarding, permissions, privacy/support pages, App Store submission, review resolution, and release iteration.
- Integrated OpenAI, Whisper, Claude, and REST APIs into phone-native workflows for scheduling, summarization, transcription, personalization, and reviewable AI output.
- Debugged production issues across layout, state management, persistence, async requests, permissions, latency, response formatting, and iPhone/iPad compatibility.
- Standardized reusable SwiftUI patterns for onboarding, settings, loading/error states, permissions, and AI review flows to accelerate iteration across multiple apps.

SELECTED MOBILE PROJECTS

AI Calendar SwiftUI, iOS, OpenAI API, App Store Connect | 2025

- Built a natural-language scheduling workflow that converts user intent into structured plans/events with editable review states, input validation, loading/error handling, and privacy messaging.
- Designed ambiguity handling for missing dates, unclear intent, edit-before-save flows, and inspectable AI output to reduce first-use friction.

WeiRabits / Habits SwiftUI, iOS, local persistence, App Store release iteration | 2025 - 2026

- Developed a habit tracker with recurring progress states, reusable UI components, iPad layout refinements, naming updates, local persistence, and multiple App Store release iterations.

AI Note / AI Voice Notes SwiftUI, Node.js, Express, OpenAI/Whisper APIs | 2025

- Built note and voice-capture workflows with backend endpoints for transcription and summarization; debugged audio/API configuration, model-response failures, latency, and output-format issues.

Software Engineering Team Project React Native, Expo, JavaScript | 2024

- Collaborated in a sprint-based mobile engineering team; contributed frontend features, release testing, bug triage, and mobile/browser behavior fixes while translating changing requirements into testable UI updates.

Additional Public iOS Portfolio SwiftUI, iOS, App Store | 2025 - Present

- Portfolio includes Piggy Accounting, AI Weather, AI Pomodoro, AI Vocabulary, Food Calories, Meditation, DailyMatters, AIMBTI, AI Drink Water, and AI Smart Light; full app list and links available on portfolio site.

EDUCATION

University of Massachusetts Amherst

Amherst, MA | May 2025

B.S. Computer Science; B.S. Managerial Economics

- Dean's List Honors: 5 semesters; 4-year merit-based scholarship.
- Coursework: Data Structures & Algorithms, Operating Systems, Software Engineering, Machine Learning, Computer Networks, Databases, Statistics, Managerial Economics.
